NOTICE OF PUBLIC COMMENT PERIOD

Non-Time-Critical Removal Action

John H. Kerr Dam and Reservoir

Maintenance Yard Site and

DDT Handling Area

Boydton, Virginia

An Engineering Evaluation/Cost Analysis (EE/CA) has been performed under a Non-Time-Critical Removal Action (NTCRA) to identify, evaluate and recommend treatment technologies of soil contaminated with pesticides (DDT, DDD, DDE) at the DDT Mixing Site, and soil contaminated with dioxins and pentachlorophenol (PCP) at the Lumber Treatment Shed Site. Both locations are part of the Maintenance Yard Site at the John H. Kerr Dam and Reservoir facility in Boydton, Virginia.

An EE/CA has also been performed under a NTCRA to identify, evaluate and recommend treatment technologies of soil contaminated with pesticides (DDT, DDD, DDE) at the Abandoned Railspur, DDT Handling Area at the John H. Kerr Dam and Reservoir facility in Boydton, Virginia.

The removal action alternative selected for all sites is excavation and off-site disposal. This alternative will effectively meet the removal action objectives and the recommended action levels for site contaminants based upon future industrial use.

Public Participation in the Decision-making Process

The public and state and local government officials are invited to review the EE/CA Reports. Copies are available at:
